-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Larsson et al 5533804.

The operation of the preparation of the solution by the Larsson (et al) reference discloses the preparation of a solution using water and powder components, column 2, lines 4-8; lines 12-18, and inducing a flow regime in the vessel bag through a magnetic mixer drive and a stir bar in the bag which rests on the bottom of the bag, column 2, lines 30-36.

It is noted that the rotation of the stir bar would inherently also cause a mechanical dispersion of any settled powder near the sweep of the length of the stir bar. With regards to the turbidity of the solution the phrase 'high turbidity' is a relative term, It is deemed that the phrase "high turbidity" is satisfied when suspended undissolved powder within the fluid causes a sweep of high turbidity until it is fully dissolved. With regards to a minimum bulk movement of the dissolution medium (water), it is noted that the stirrer bar is of a size which would only cause bulk movement near the sweep of the stirrer bar and thus it is

deemed that it causes a "minimum bulk movement" since the term "minimum" is a relative term.

Allowable Subject Matter

3. Claims 2-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The closest prior art is Blanchat 839714 dated Dec 25 1906 which shows it is known to stir a vessel of butter (food) using a rotating stirrer having bristle brushes 5 which engage and sweep the bottom of the vessel. In contrast, the instant claims distinguish over the prior art whereby within the environment of processing of a dissolution of a pharmaceutical product in a dissolution medium, the brushes are biased into sliding engagement to the bottom portion of the vessel.

Conclusion

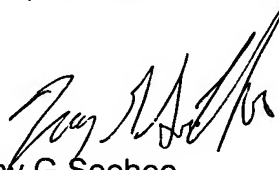

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following disclose the brush or sweeping elements for use in mixing to a bottom surface of a container: Damrow 2488053, Kritikson 3132849, Stoelting 1728637, Waatmough 1774910, Esslen 2047317, Esslen 2047318.
